

CompuServe

Highlights

Volume 1 Number 1

Information current as of June, 1983

Brief descriptions of many services available on the CompuServe Information Service including a complete subject index.

Introducing Highlights, your handy digest of CompuServe Information Service products and services.

Highlights contains the complete CompuServe Information Service subject index, including the "GO" page locations to find on-line items easily.

Also included are brief descriptions of many subjects and services available on CompuServe. Different subject items and services will be featured in each issue, so we suggest you keep successive issues of Highlights as handy references.

Highlights is published by TODAY magazine for the CompuServe Information Service.

Commands

The following is a list of commands for using the CompuServe Information Service. Simply type the letter or letters preceding the definitions

shown here and then press the (ENTER) or CARRIAGE RETURN key.

T - TOP the TOP menu page. This takes you directly to the first page of the CompuServe database (CIS-1).

M - MENU this means previous MENU. This command will take you to the menu page which directed you to the page you are currently reading.

G - GO the GO command will take you directly to a page specified by an information provider code and page number, for example, GO TRS-1. By typing GO, and the information provider code (no page number), you will be taken to the first page of the information provider area.

H - HELP you will receive instructions after typing in HELP and pressing the (ENTER) or CARRIAGE RETURN key.

S - SCROLL this command will allow you to continuously print pages to your screen until the last page in a series is displayed. If you are at a menu page, typing S followed by the number which corresponds with the menu topic, will continuously print the pages related to that topic to your screen.

OFF this command will disconnect you from CompuServe immediately after it is typed in and followed by a CARRIAGE RETURN or (ENTER).

F - FORWARD this will take you FORWARD one page. It displays the next page in a series of pages. Pressing the (ENTER) or CARRIAGE RETURN key once will also display the next screen of information.

B - BACKWARD this command will back you up and redisplay the page preceding the one you are reading.

User Information *GO CIS-4*

The User Information main menu item contains information which is of interest to all customers. Some of the User Information items are:

Changing Credit Card Info allows you to change the existing information about your current credit card, or to enter another credit card choice.
GO CIS-4

Changing Terminal Defaults shows you how to specify terminal type, length of line, width of line, point of entry at logon, EMAIL waiting notice at logon, etc. You can make the default settings permanent or temporary to that session.
GO CIS-4

Changing Your Password prompts you for your current password and then asks for your new choice of password. You are immediately notified when the password is changed successfully.
GO CIS-4

Command Summary and Usage Tips displays a brief description of the commands which can be used in the Videotex area.
GO CIS-4

CompuServe Viewpoint responds to the more common customer questions and briefly presents the CompuServe Information Service's short- and long-range plans.
GO CVP, GO CIS-4

Current Rates displays the current rates for using the CompuServe Information Service.
GO CIS-4

Electronic Bounce Back makes it easy for you to request free information from advertisers in Today magazine. Insert your name, address and names of any advertisers from whom you'd like information.
GO EBB, GO CIS-4

Feedback to Customer Service briefly describes how to use the Feedback service and then allows you to order documentation or to send comments, suggestions or questions to the Customer Service staff, etc. Your Feedback is read and responded to via EMAIL to the same User ID which entered the message. Feedback responses are usually made within 48 hours after receipt by Customer Service. Your connect time is free while using this service, in the form of

HOME SERVICES

Product Highlights

a credit given for the time you use Feedback. It is recommended that you use Feedback to communicate with the CompuServe Information Service.

GO CIS-4

Network Access Telephone Numbers searches and displays the most up-to-date list of telephone access numbers by the state or area code you select. Pending and recent changes are available as well as a complete list by baud rate.

GO CIS-4

Reviewing Your Charges provides you with information about your current and past charges for purchases and services used.

GO CIS-4

What's New presents the new and enhanced features available from the CompuServe Information Service.

GO NEW, GO CIS-4

Subject Index *GO IND*

Subject Index displays the entire Subject Index or searches and displays features by key word entry. It also lists the IP code/page reference for each item so you can use the G (GO) command to directly access the item of your choice.

GO IND-1

Travel *GO HOM-90*

Firstworld Travel Services — a full-service travel agency with over 100 discounted worldwide tours and cruises available for booking. This California-based franchise operation offers 24 hour, seven day air and ground transport as well as hotel/motel

accommodation bookings with ticket delivery to your home, office or airline counter.

GO TVL

Pan American World Airlines Immigration Guide and Frequent Flyer Worldpass Program — Pan Am's

Immigration Guide offers helpful information about immigration requirements in all countries to which this major commercial airline flies. The Worldpass program offers special benefits to frequent Pan Am customers.

GO PAN

Travel Fax — Escape, Inc. provides this business and tourist information guide to foreign countries traveled frequently by Americans. This offering includes information about customs, holidays, exchange rates, weather and other relevant demographics of each foreign country included.

The Official Airline Guide Electronic Edition

The Official Airline Guide Electronic Edition (OAG EE) contains all of the commercial airline flight schedules operating throughout the world. Also included is detailed fare information for flights operating within North America. The schedule information is updated weekly to keep pace with the more than 105,000 changes that are made each month. Fare information is updated daily. Over 300,000 fare changes are processed each month and then included in the Electronic Edition. The OAG Electronic Edition gives subscribers the most accurate fare and schedule information available.

While schedules and fares are displayed in the OAG Electronic Edition, actual flight reservations must still be made through the individual airlines, their representatives or by using one of CompuServe's on-line travel services listed under "Travel."

Once you have accessed the Electronic Edition, a complete information and Assistance Menu may be viewed by using the command /I (ENTER) on your terminal. After entering the Information and Assistance Menu, a command of I (ENTER) will display complete How-to-Use instructions. The instructions will guide you in your use of the Electronic Edition fares and schedules. To view schedules for a travel market, use the command /S (ENTER); to display fares, use the command /F (ENTER). The entry of /S or /F followed by (ENTER), will begin a sequence of "user friendly" prompts.

The Official Airline Guide Electronic Edition is a premium service on CompuServe. In addition to the CompuServe connect rate, there is a \$21 per hour premium program charge for standard time and \$32 per hour premium program charge for prime time to access the OAG Electronic Edition, billable in one minute increments.

CompuServe Information Service subscribers can find the OAG Electronic Edition on the main menu through "Home Services" and then "Travel" or through "Business and Financial" then "Travel Services" or off the "Aviation" menu in Services for Professionals. To go directly to the OAG EE, simply enter GO OAG at any menu page.

Watch the "News Headline" messages following the Electronic Edition "Welcome" display for announcements of new features.

HOME SERVICES

Product Highlights

Shopping *GO HOM-40*

Comp-U-Store — a discount home shopping catalog service listing nearly 60,000 name-brand, durable consumer items such as watches, TVs, radios, VCRs, kitchen appliances, music and sporting equipment and much more. Offered by CompuCard International, Inc. of Stamford, Conn., this service requires membership, and purchases are payable to major credit cards. An on-line auction is a weekly feature.

GO CUS

Music Information Service — provided by Shoemaker's Music, Inc. of Ft. Lauderdale and Hollywood, Fla., this service offers a complete home shopping catalog for musical equipment, sheet music and parts. The offering also features exclusive interviews with known musicians, a weekly question and answer column and feature article, as well as a special interest discussion forum.

GO MUS

Special Interest Groups/Forums *GO HOM-50*

Arcade — a special interest group for discussing arcade games and related industry topics.

GO HOM-50

CBers Interest Group — a general topic interest group dedicated to the dialogs of the many CB Simulator users.

GO HOM-50

Cooking — a general interest group dedicated to dialog about the art and craft of cooking. This group is sponsored by Better Homes and Gardens.

GO HOM-50

Educators — a special interest group dedicated to discussion of the role of microcomputers in education from both the professional educator's and learner's perspectives. Includes dialog about the user of computer assisted instruction programs (CAI) such as PILOT and PLATO.

GO HOM-50

Communications *GO HOM-30*

CB Simulation — a 36-channel CB Simulator that allows any number of users to converse via their individual terminals in open, private or encoded modes. Users can tune to any of the 36 channels and monitor several channels at once.

GO HOM-30

CB Society — a frequently updated social interest publication featuring new CB Simulator users, in-depth personal interviews with noteworthy subscribers, CB party reports and social news items about CB users.

GO CUP

Lobby Letters of America — a professional lobby letter writing service which will compose and address a customized letter for the user directed at any nationally known government, industry, media or religious organization or individual.

THE MULTIPLE CHOICE

Product Highlights

The Multiple Choice Puts You to the Test

The Multiple Choice offers tests and games the entire family can enjoy together. It was designed that way by its creator, Howard Millman, a professor of educational psychology at the University of Maryland.

Millman, with the help of family and friends, composes all TMC questions himself. A friend provides programming advice and helps him program TMC from his home.

A glance at the TMC menu shows plenty of choices. If it's pure fun you're after, play "Trivia Unlimited," which lets players compete against themselves and others by answering a wide variety of trivia questions. If your recall skills can stand a little brushing up, the 10-question warm up quiz is probably your best choice. But if you're the type who pores over little-known facts, the "sudden death" option is for you. Questions are much more difficult, and the scoring method truly tests your mettle: you keep answering questions until

you've missed three; then the test ends and your score is compared with the top three scores by all other test takers.

The children can choose a TMC designed especially for them. "TMC for Kids!" has five tests and games that are fun and help perfect already-learned skills. "Silly Fill-Ins" asks kids seven and older to fill in missing words in a story. A sports quiz tests knowledge of basketball, baseball, soccer, football and tennis rules and terms.

"J'U'M'B'L'E'D Words" asks players to recognize disguised words, while another game tests knowledge about the 50 states. And if that grade-schooler of yours knows what color Kermit's bicycle was in "The Muppet Movie," they'll like "Trivia for Kids."

In a more serious vein, Millman also created an intelligence quotient exam and one that provides some insights into who you are. "The TMC Intelligence Test," while designed to be similar to an actual IQ exam, is not meant to be a substitute for one.

"The TMC Personality Profile" was created based on general personality patterns. Questions cause the test taker to look at his psychological, physical and spiritual self, and measure how he views relationships and decision making. At the test's end, the computer provides a chart that shows how well the test taker is caring for himself in each of eight areas examined.

Perhaps the most serious TMC category is "TMC Analogies," which simulates a national exam taken by graduate school applicants. Questions are close to the test in length, type of analogies and trick questions. Test takers can choose a practice quiz or pick the more difficult timed exam.

After investigating any of the TMC categories, Millman invites users to tell him what they thought via "TMC Feedback." Millman personally reads all the "letters" he receives and answers many of them.

The Multiple Choice can be accessed under Home Services, "Education."

Special Interest Groups

GO PCS-50

CLUBIG sponsored by Computers and Electronics Magazine with members interested in the different types of computers and software.
GO PCS-50

Commodore a group that discusses applications, software and communications for Commodore PET personal computers, as well as programs and applications for the Commodore VIC 20s. The user's group is sponsored and maintained by Commodore International.
GO PCS-50

CP-MIG a group that has a common interest in the fast growing and popular CP/M operating system. The group discusses CP/M-based software and the various types of machines that support CP/M systems.
GO PCS-50

MUSUS sponsored by the UCSD p-System Users' Society (USUS) to promote the exchange of information about UCSD Pascal and its various applications. MUSUS also provides member to member and member to USUS communication, including the interchange of programs written in UCSD Pascal.
GO PCS-50

RCA an RCA microprocessor users' group that provides all users of RCA 1800 microprocessors and videotex terminals with support, advice and software information.
GO PCS-50

SIG*ATARI the largest and most active group of ATARI computer users. It features message sections and has an interactive conference feature, an extensive database of public domain software and an experienced staff to provide immediate Feedback to user requests.
GO PCS-50

The MicroSoft User Group — a closed user group that allows users to interface with the MicroSoft Corporation. MicroSoft is a major supplier of software and hardware for most microcomputers.
GO PCS-100

The OSI User Group — a group interested in the Ohio Scientific microcomputer. Detailed OSI program information is available through this group.

EMAIL Gets the Message Fast!

EMAIL, or electronic mail, is to the computer age what the Pony Express was to the frontier era: an innovative way to get there first and fastest.

CompuServe's newly-revamped electronic mail system is a logical, simplified and user-friendly system that offers an inexpensive and efficient method for communicating. Users access the EMAIL feature by first making a local phone call to hook into the CompuServe network. After logging on, electronic mail can be accessed directly through the Home Services, Business and Finance and Personal Computing menus.

EMAIL is stored by subject headings, which also include the sender's name and the date sent, allowing the receiver to peruse his "mailbox" at a glance and select the order in which the items will be read. Each "mailbox" will store a maximum of 20 items, and those which do not receive the command to be

filed will be deleted. No need to worry if you're the absent-minded type — you must respond to the question of filing with a yes or no response to each piece of mail before dealing with the next. This method eliminates problems arising from users putting off, and then not recalling, the action taken on a particular piece of mail.

Under the revamped system, mail can be added to existing files or new files can be started, depending on the user's commands. In every instance, the user is given feedback on what action has been taken and EMAIL commands are consistent with the commands used in other areas. The electronic mail feature uses standard editors — ICS and FILGE.

Electronic mail is easy to use, but how practical is it? The cheapest phone call from Columbus to Los Angeles (after 5 p.m.) costs 42 cents for the first minute and 30 cents for each additional minute — for a grand

total of \$18.12 plus tax for a one hour call. While it's unlikely that the use of electronic mail would supplant such a long phone conversation, it would solve the problem — cheaply — of callers who continue to miss one another's calls.

Unlike other systems, CompuServe's system does not require that both sender and receiver have computers. Two terminals are all that are needed with the CompuServe network. Inexpensive, portable terminals can be used by those on the go to connect with CompuServe almost anywhere and at anytime. Compared to overnight mail services — one of which charges upwards of \$20 per item — the cost of using EMAIL is very attractive indeed.

Its speed, combined with the features of privacy, easy access and storage capabilities, may well make electronic mail one of the best communications options available.

Type GO EMA to use EMAIL.

SERVICES FOR PROFESSIONALS

Product Highlights

Medical Services *GO SFP-50*

AAMSI Medical Forum a "discussion forum" sponsored by the American Association for Medical Systems and Informatics. Members represent all segments of the professional medical community and use this forum to exchange ideas and information on medically-related topics. These members can leave and retrieve messages under 11 different topic categories. These message categories are: General Information, Emergency/Specialty Care, Mental Health, Rehabilitation Services, Surgical Specialties, Medical Specialties, Clinical Information, Databases, Patient Care Services, other Professional Activities and Primary Care. Members can also access an extensive "help" file on how to use this forum, plus receive a listing of computer-based bulletin boards and databases that contain medical information. Other items of interest in the forum include

general information on the U.S. National Library of Medicine's Medline service and a description of the microcomputer version of the MUMPS language. Another forum feature that members can take advantage of is "on-line conferences" where the members discuss a topic via their computer keyboard. This forum currently has over 1,500 members throughout North America.
GO SFP-50

FOI: Newsline provides topical FDA information for medical and regulatory affairs professionals. The information includes FDA press releases and Federal Register Notices, drug approvals, device approvals, FDA regulatory letters and new FDA

documents. FOI also offers an on-line FDA document ordering service.
GO FOI

Veterinarian's Forum — a forum established to provide a symposium for the exchange of information related to animal needs and maintenance, preventive care and medical advice. Members include veterinarians and other individuals interested in animal health care. These members can leave and retrieve messages under seven different topic categories. These message categories are: General Information, Companion Animals, Horses and Livestock, Diagnostic Medicine, Anesthesia and Surgery, Medical Management and Nutrition and Behavior. Members can also access information on animal diseases, treatments and surgical procedures, plus participate in regularly scheduled "on-line conferences."

Aviation Services *GO SFP-20*

Aviation Safety Institute

provides information on a variety of safety-related topics. Topics include Service Difficulty Reports and Hazard Reports, along with articles on flight operations, human factors and safety tips. The information in this electronic newsletter is updated twice a month.
GO ASI

Aviation Special Interest Group (AVSIG)

— a discussion forum where members representing all segments of the aviation community can exchange ideas and information. The group currently has more than 1,300 members. These members can leave and retrieve messages under 10 different topics including general information, airframe, air traffic control, avionics, home/experimental aircraft, noise and powerplants. Members can also participate in "on-line conferences" to communicate with other individuals in real time.

Members can also access "databases" such as a report on the effects of air turbulence and a list of National Weather Service word contractions.
GO SFP-20

Aviation Weather — includes hourly reports, terminal forecasts, previous hourly reports, winds aloft forecasts, NOTAMS, PIREPS, SIGMETS, AIRMETS, area forecasts, radar summaries and radar weather maps. Reports are updated throughout the day as information is received from the National Weather Service. **Note:** A "Flight Planning and Aviation Weather User's Guide" that provides further explanation of these services can be ordered from CompuServe.
GO AWX

Flight Planning — three programs are available which

prompt the user for all necessary input to calculate a complete flight log between any two points in the continental U.S. One program produces a Great Circle RNAV flight route. A second creates an incremental approximation to a Great Circle course via VOR/DME stations. The third program accepts user entered NAVAIDS and creates an incremental approximation to a Great Circle course. The database includes the coordinates of nearly 6,000 U.S. airports and will accept the latitude and longitude of airports not included in this base.

Each program offers the effect of forecast winds aloft on the flight plan, the estimated climb and descent profile of your airplane, endpoint weather forecasts, enroute weather briefings and alternate destination weather forecasts.

The programs were developed by Engineering Management Information (EMI).

SERVICES FOR PROFESSIONALS

Product Highlights

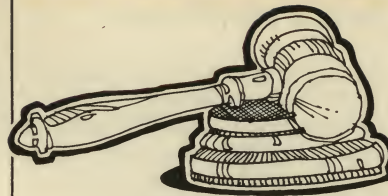

Environmental Services GO SFP-1

WaterLine sponsored by the National Water Well Association, a professional trade association serving as a research institute, an educational foundation and publishing company, this network contains information of interest to the ground water professional, home owners with wells and government officials. WaterLine provides weekly updated information regarding new legislation and rulings, physical, biological, and chemical water contaminants, listings of state agencies responsible for water analysis services, a biweekly newsletter, selected abstracts, publications and literature searches, service reviews and listings of available software for ground water professionals. There are also sections to post messages for other WaterLine users and an area where users can exchange ideas and programming tips.
GO WWA

Agri-business GO SFP-10

Crop Break-Even Analysis a program designed to help solve the problem of trial and error in the Agri-business industry. The program is divided into three sections: "indirect cost," "direct cost," and the "computed output." The Break Even analysis will request specific information from the user concerning size of farm, fixed assets and operating expenses. After all inputs have been entered, a Break Even analysis will then be computed. The value of this program is that the user can then enter different values for the input questions and recompute the Break Even. This "What If" capability can save both time and money. The net result is that the user can simulate the plant, harvest and market aspects of a given crop within 20 minutes. The output is in columnar form and is configured for a terminal with 64 characters per line.
GO SFP-10

Legal GO SFP-10

Legal Forum a discussion forum where members representing all segments of the legal community can exchange ideas and information. These members can leave and retrieve messages under the categories of General Information, Computer Law, Lawyer Referral Network, Pro Bono, Issue Forum, Software, Lawyer to Lawyer and Law Enforcement. Other features available in this forum include information on accessing and using the Westlaw and Lexis legal databases, a bibliography of selected articles on computer law and weekly "on-line conferences."
